DNA Data Bank of Japan

Release 1.0,   July 1987

66 loci, 108970 bases, 4291 lines

This data base may be copied and redistributed freely,

without advance permission,   provided that   this

statement is reproduced with each copy.

Prepared by:

Takeo Maruyama   General Manager

Sanzo Miyazawa   Manager/Database Administrator

Hidenori Hayashida   Database Administrator/Scientific Reviewer

Motono Horie   Secretary

Files included:

1) relnote1.0: this note
2) ddbj1.0:   DNA data
3) ddbjd1.0:   DNA protein coding sequences extracted
                  from ddbj1.0
4) ddbjp1.0:   protein sequences translated from ddbjd1.0

The 3rd and 4th files above were generated by using
"seqext" and "pepttr" programs maded by Dr. Jim Fickett
in GenBank, Los Alamos National Laboratory.

Acknowledgements:

We thank GenBank for helps, especially for providing us
with such tools that are useful for quality control in
data entry.
